Graphical Point of Sale

G-POS touch screen software is a versatile graphics based product compatible with most leading manufacturer's touch screen hardware. Up to 400 layers of product and pricing information can be stored on the system including graphic images as well as descriptions. This graphical system drastically reduces the training time for operators and makes it virtually language independent. The product buttons are infinitely variable in size enabling the system to be fully customised for each customer, giving unlimited functionality. On screen prompts and product information allows staff to "up sell" to customers. Back office sales reports are a standard feature of G-POS's utility programming and setup module.

PERIPHERALS

Wireless Chip & Pin

Wireless Order Taking with Orderman

Cashless Catering Option

Fingerprint Recognition

Stock count down

This feature enables staff to see at a glance how many products or meals are left at any one time. Useful for the "specials board" or for any product where stock is limited per day.

Table planning

Graphical representation of the restaurant with up to ten levels dramatically speeds up transaction times and ensures everything is billed correctly. The use of colour coding enables staff to easily view all tables at a glance, allowing them to see the current state of all transactions.

Prompts and information

Each PLU can have its own information or prompt screen. Typical uses are cocktail information, meal contents or staff prompts to offer clients a promotion.

Loyalty cards

Loyalty can be implemented at three levels:-

- Discount cards - offer a straight discount attached to a card for privileged customers.
- Simple loyalty points - allow customers to gain points based on their spending habits. Points can be redeemed as a part payment against future sales.
- Integration with Fidelity's Instant Loyalty - obtain flexibility when it comes to discounts and points whilst populating a true CRM back office package with live spending habits.

Customer accounts

Different customer accounts systems can be interfaced directly to G-POS via Plug in code technology. Plug ins are available for Total Control, Sage Line 50 and Text interface.

Search the customer database at the point of sale or call up the customer from an input device such as a barcode, mag card or fingerprint reader. Allows payments against accounts and enforces credit limits.

Reporting

Comprehensive sales reports are available on both the touch screens and also from the back office programming utility. These include the facility to sort by date range together with a journal viewer.

Reports include:-

- Plu, main group and group sales
- Financial & Drawer totals
- Clerk & Open Clerk totals
- Tax totals
- Hourly, 1/2 hourly & 1/4 hourly totals.
